Attachment to Advisory Action

Response to Arguments:

Applicant's arguments filed November 14, 2006 have been fully considered but they are not persuasive. Applicant argues that by their method, reactive species are generated by exciting a precursor "with a radio frequency (RF) power via the annular plasma" whereas in the applied art, reactive species are generated by directly exciting a precursor with an applied electromagnetic radiation. Applicant's reliance on an intermediary annular plasma as a means of transferring energy to the precursor may very well facilitate a shift from a direct excitation to an indirect excitation. Nevertheless, the applied references teach injecting a precursor into an annular plasma whereby at least some indirect excitation of the precursor will occur.
